

If you want to fill out your timecard from your HOME machine you need to use **Microsoft Edge Chromium** or **Google Chrome**.

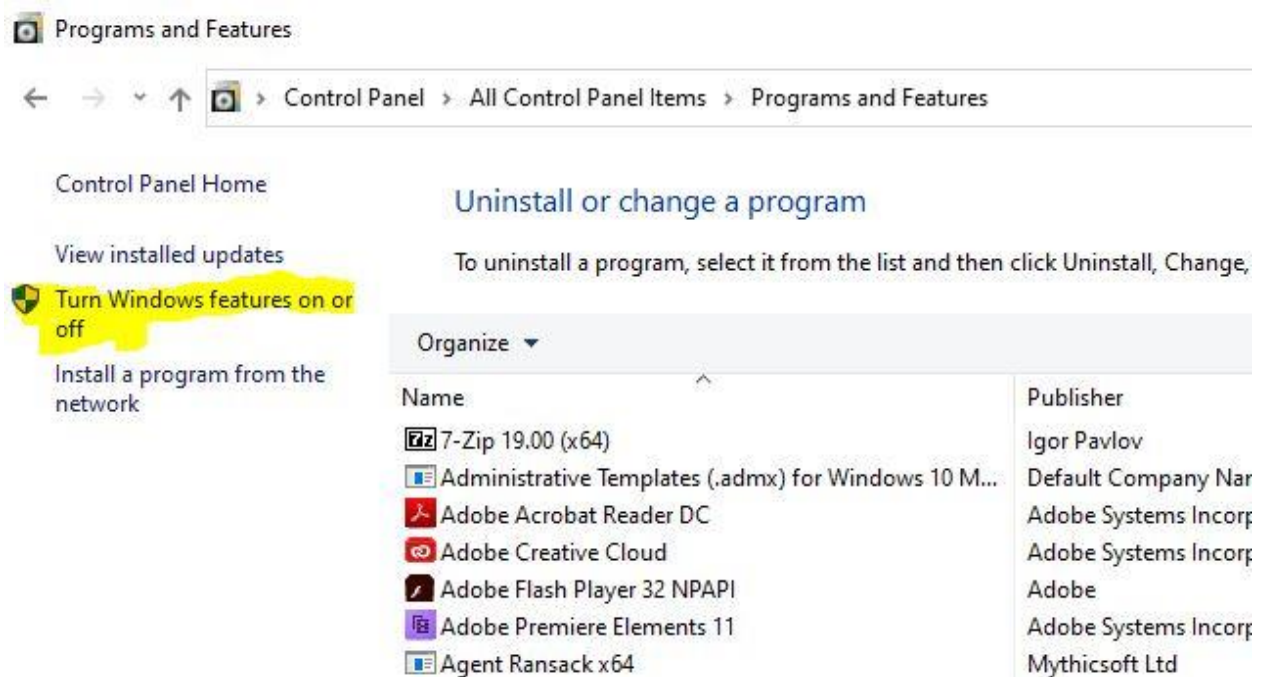

Use the following link to access Ajera <https://ajera.com/>

Some people may need to take an extra step and install missing Windows components to make it work. When you try to fill out your timecard it will let you know you are missing the components.

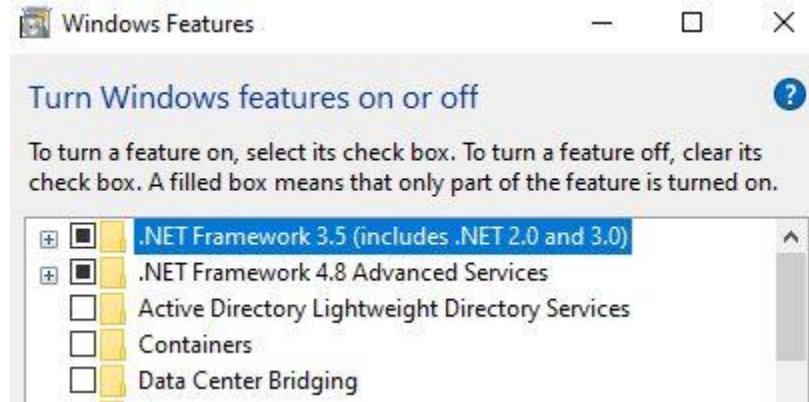

To install them you need to go to **Control Panel** and pick **Programs and Features**

From there you pick **Turn Windows features on or off**

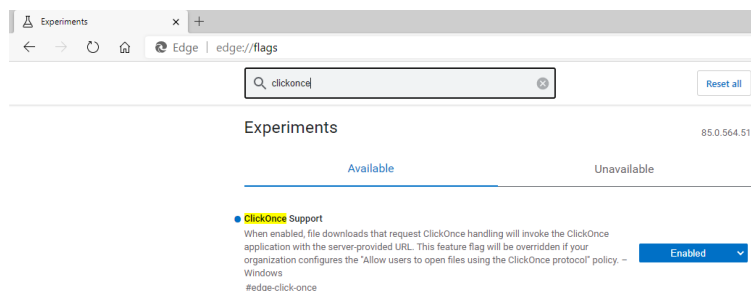

Finally make sure that **.NET Framework 3.5 (includes .NET 2.0 and 3.0)** is checked. If it is not checked select it and let it run the install.

Now try accessing <https://ajera.com/>

If you receive a pop-up message saying, *“Do you want to open Ajera application from [clickonce.ajera.com](https://ajera.com/)? Open Cancel”* please click Open so you can access the ClickOnce application.

For the new Edge version (Edge Chromium), users will receive the Edge Chromium Warning message. They will need to type `edge://flags` in the address field and search for ClickOnce Support. By default, it is set to 'Default', make sure to change it to 'Enabled'. This warning message will appear once per session and this is not something that Ajera can control as this is how Edge Chromium handles ClickOnce.

IE and Edge are the officially supported browsers; you can use Google Chrome to run Ajera if you install a clickonce plugin called 'Windows Remix Clickonce Helper'.

1. Open Google Chrome and go to google.com.
2. Search for 'windows remix clickonce'.
3. Click the search result link for Windows Remix Clickonce Helper.
4. Add the extension and run the small application that it will download.
5. Once installed, close Google Chrome then re-open it and log in to Ajera Cloud.
